Exchange

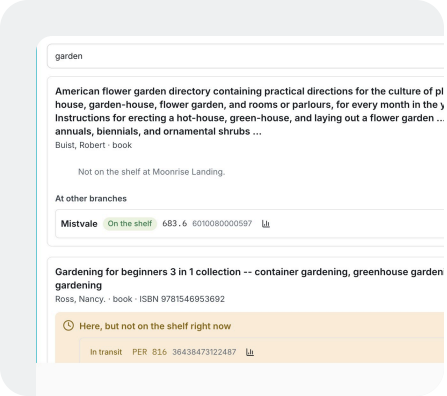

CONNECTION ENGINE

The engine behind every connection: your ILS, your other systems, and anything you build yourself. Exchange links Communico to the systems your library already runs. Staff and customers get one experience, whichever library system sits underneath.

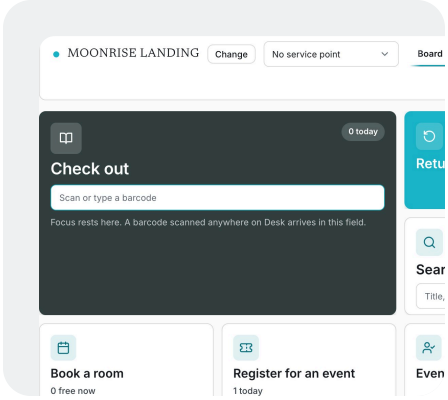

Third-party library systems

Exchange works with Evergreen, Horizon, Koha, Polaris, Sierra, Spydus, Symphony and other leading library systems, plus Circulate.

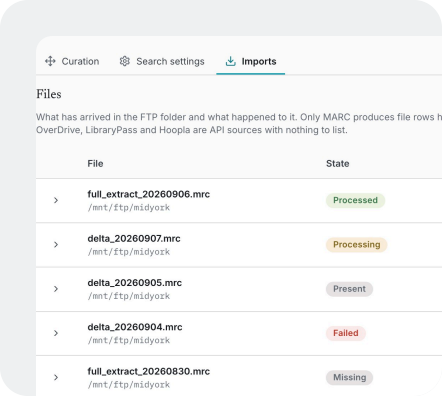

Live availability

Holds, accounts and item availability stay current because Exchange talks to your library system as people use it.

Checkout and return at Desk

Find an item, lend it and take it back from Desk. Each library's own system does the work underneath.

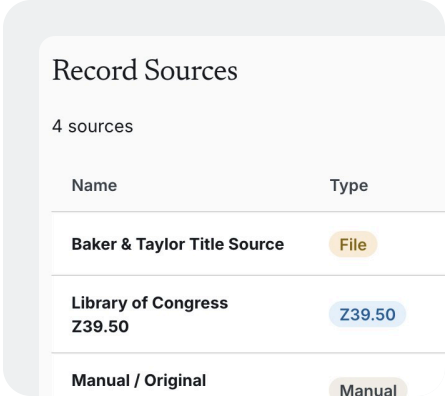

Digital content providers

Connect providers such as Libby, Hoopla and Kanopy so e-content appears in search without living in your catalog.

Sign in once

Single sign-on lets customers move between supported services without logging in again.

Data for Thrive

Exchange can bring in your customer data from any system, even by a simple file, so Thrive works for your library.

Standard SIP2 link
Connect to other library systems through SIP2, the standard checkout protocol.

File data load
Bring item and customer data in from any system by a simple file.

Circulate pull
Pull data from Circulate directly, with no file needed.

Data for Thrive
Bring in customer data from any system so Thrive works for your library.

One search
Customers find catalog items and digital collections in one search.

Explore connection
Explore searches your catalog through the connections Exchange makes.

Customer accounts
Accounts and holds stay current with your library system.

Staff single screen
Staff avoid switching between systems at the service point.

Digital collections
E-content appears in results without living in your catalog.

Connection status
See which systems are connected and how they are doing.

Empower your customers
- Search books and e-content together
- Sign in once across services
- See holds and availability live

Help staff
- Keep the library system you have
- Work from one screen
- Bring data in from any system
