November 2026: 3D Paper Turkey

This month's craft was designed by expert paper crafter Hattie Newman and originally appeared on the HP Printables website. You will need scissors and glue.

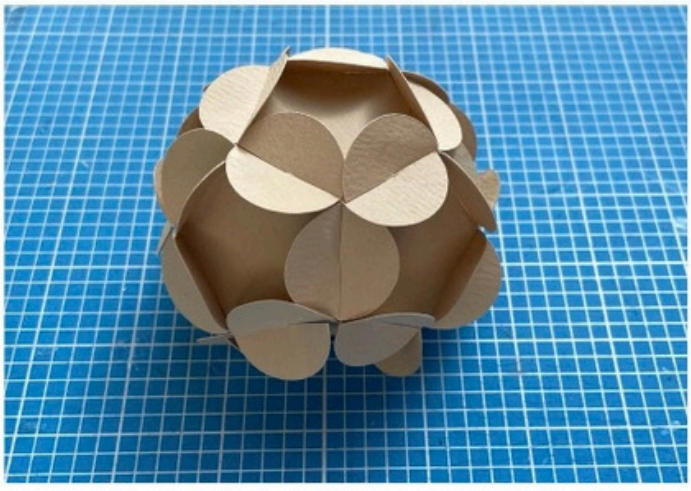

To see the full document, or to print more copies on your own, go to the following link: https://bit.ly/StayCraftyNovember2026.

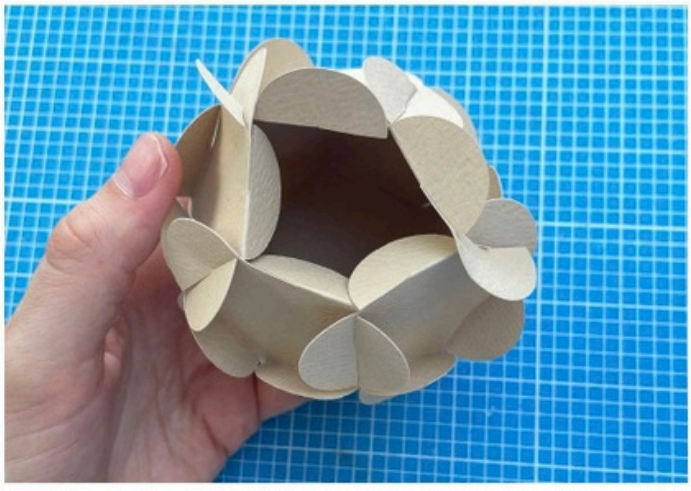

Cut out all the body shapes.

Connect all the body shapes together by sliding the slits into one another. Manipulate the paper, folding it so they all come together. Gets fiddley towards the end!

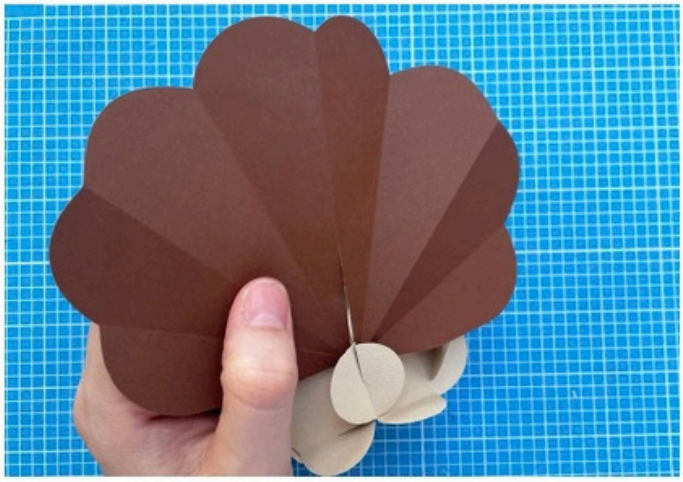

When they are all connected they will create ball shape, with semicircle flaps to represent feathers.

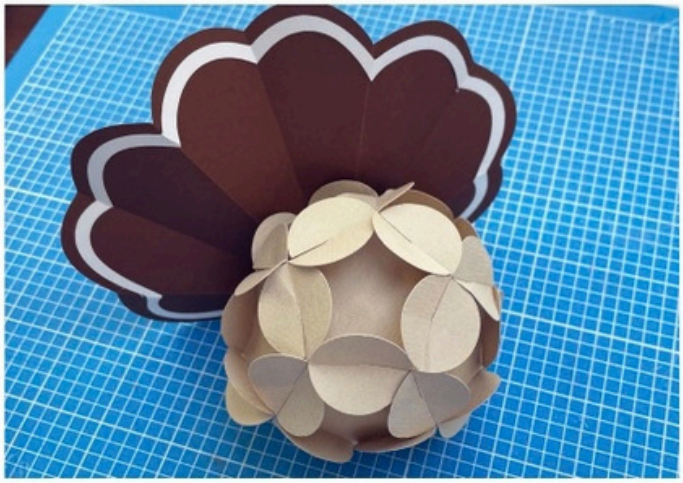

There should be a space at the base. Fold 3 semicircles inwards and 2 outward as shown. The outward ones help balance the body when the tail is attached.

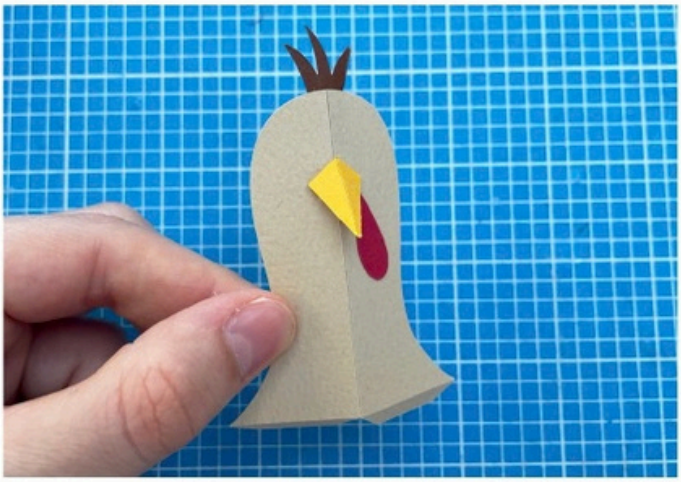

Glue the detail onto the tail, lining up the folds and about 4mm offset from the edge.

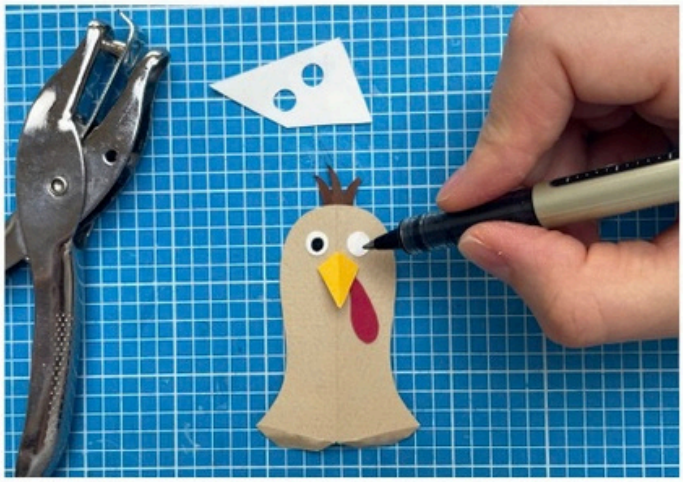

Attach the tail to the back of the body by sliding the slit through 2 of the back semicircles (the lowest, most central ones). Note the 2 semicircles facing outward at the base.

It should now look like this. The white detail of the tail is on the front.

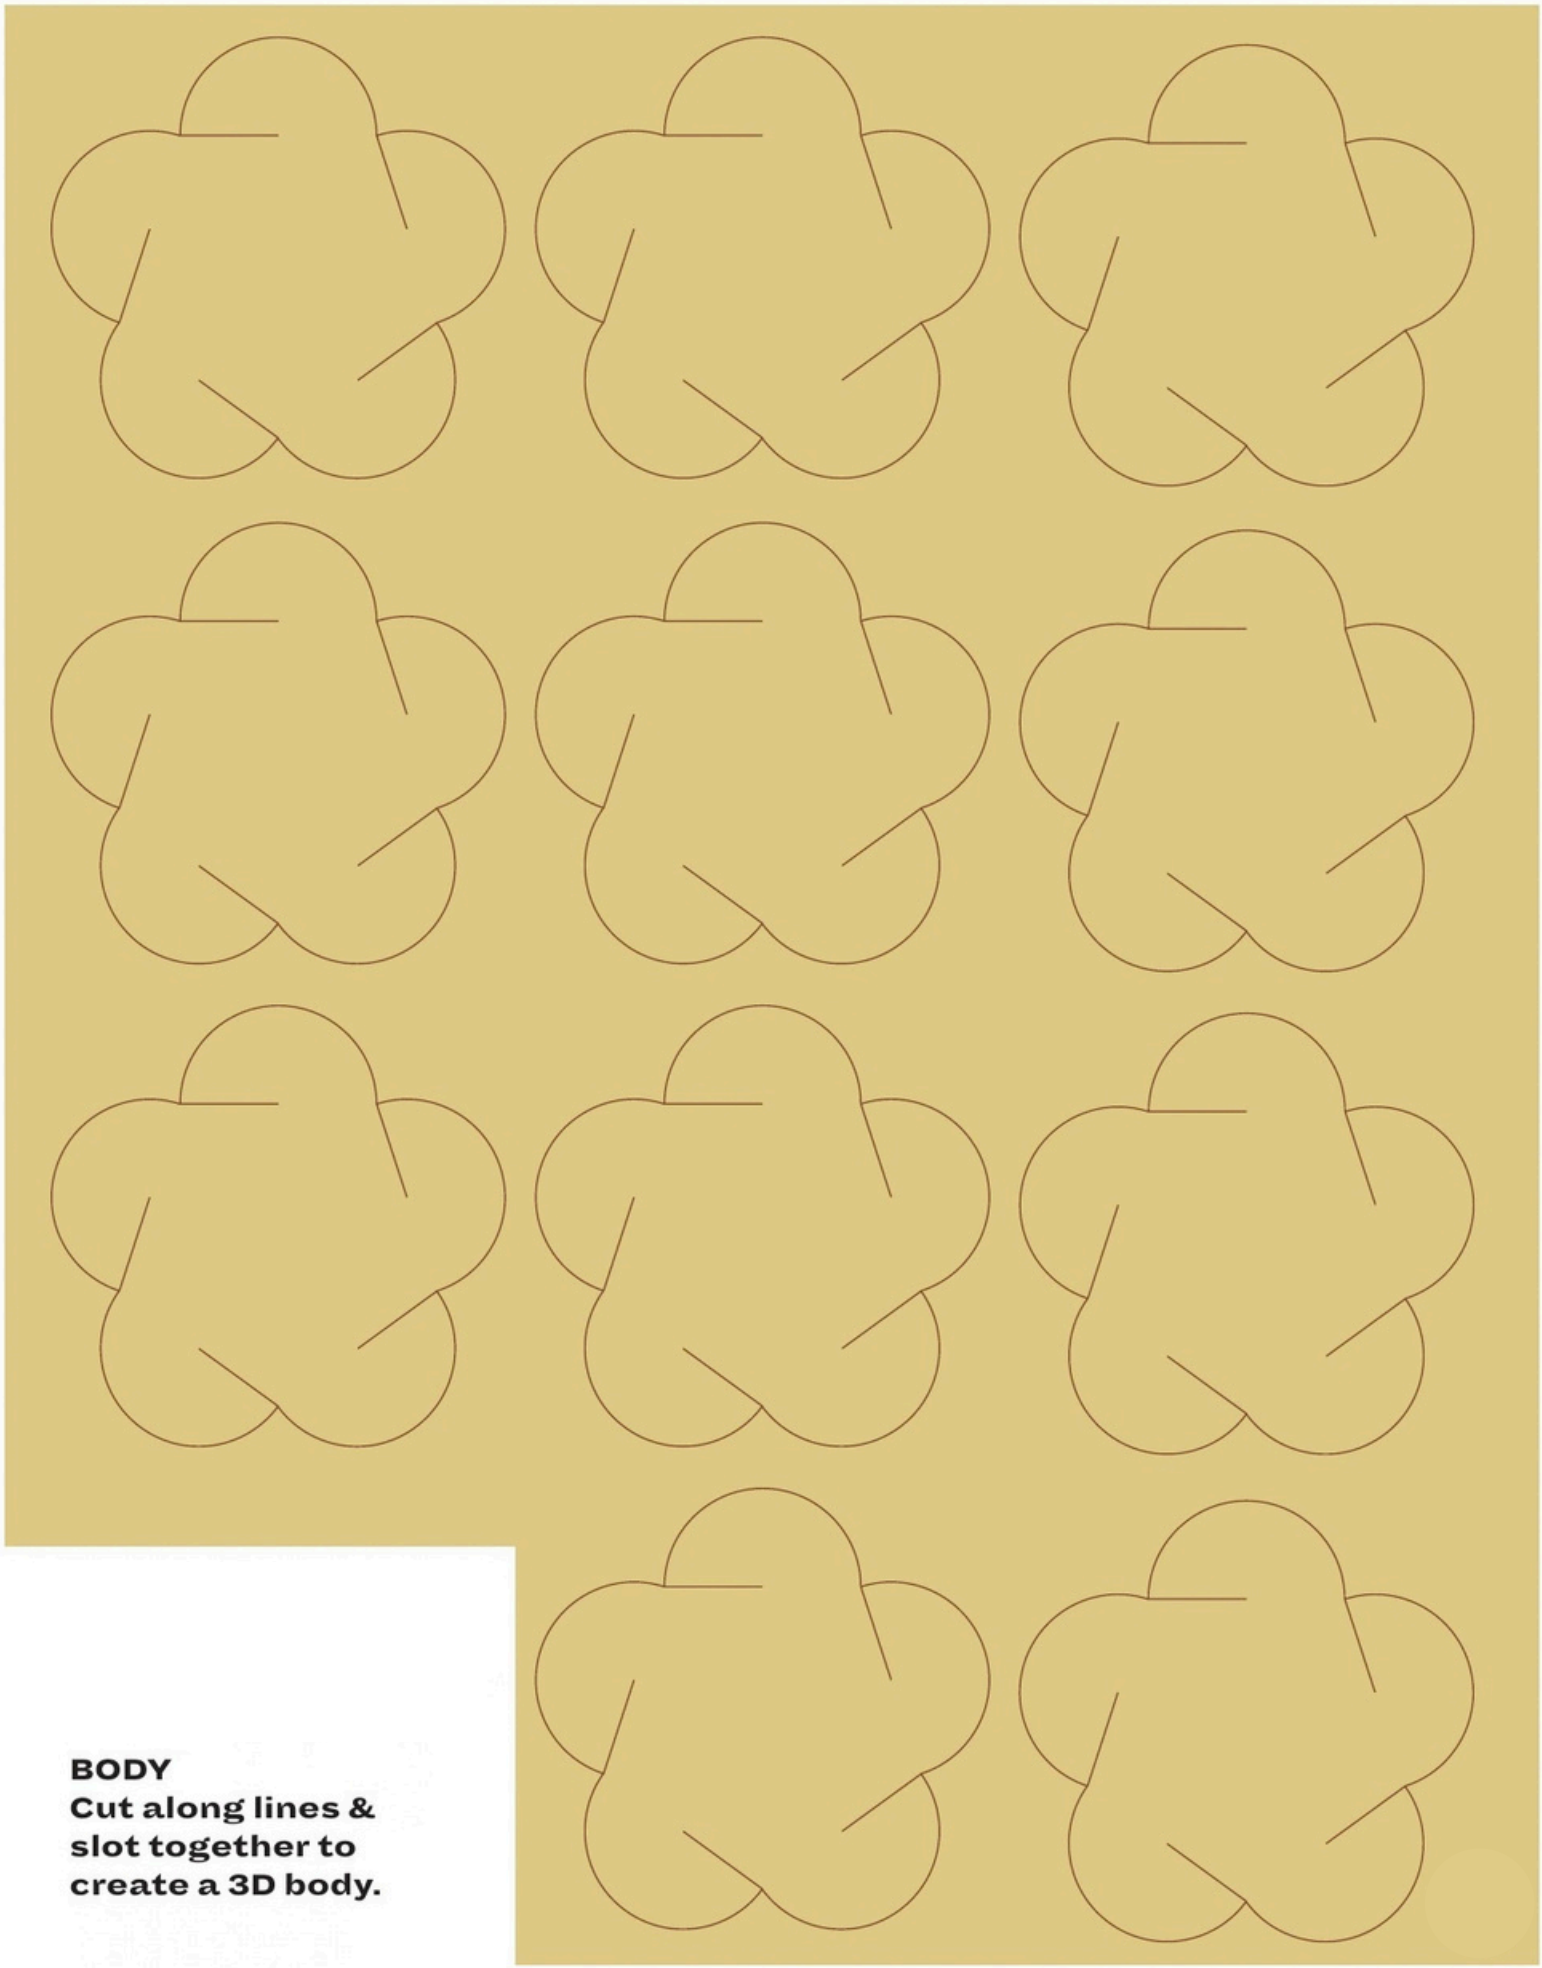

Glue the beak, wottle, and hair onto the head as shown.

Cut out two white eyes with a hole puncher, glue to the head, and draw on the pupils with a black pen.

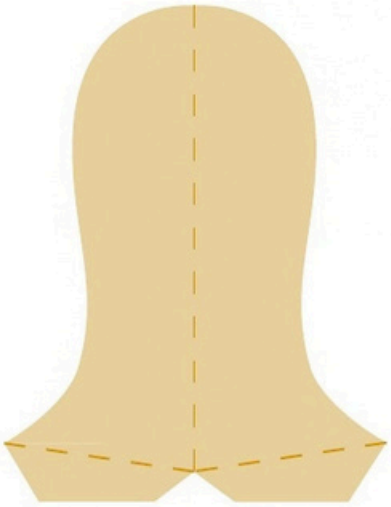

Glue the head to the top of the body, as shown, taking care to keep it central.

BODY
Cut along lines & slot together to create a 3D body.

Cut out shapes.
Score and fold
dashed lines.

HEAD

WOTTLE

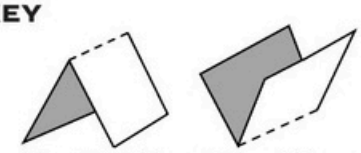

BEAK

HAIR

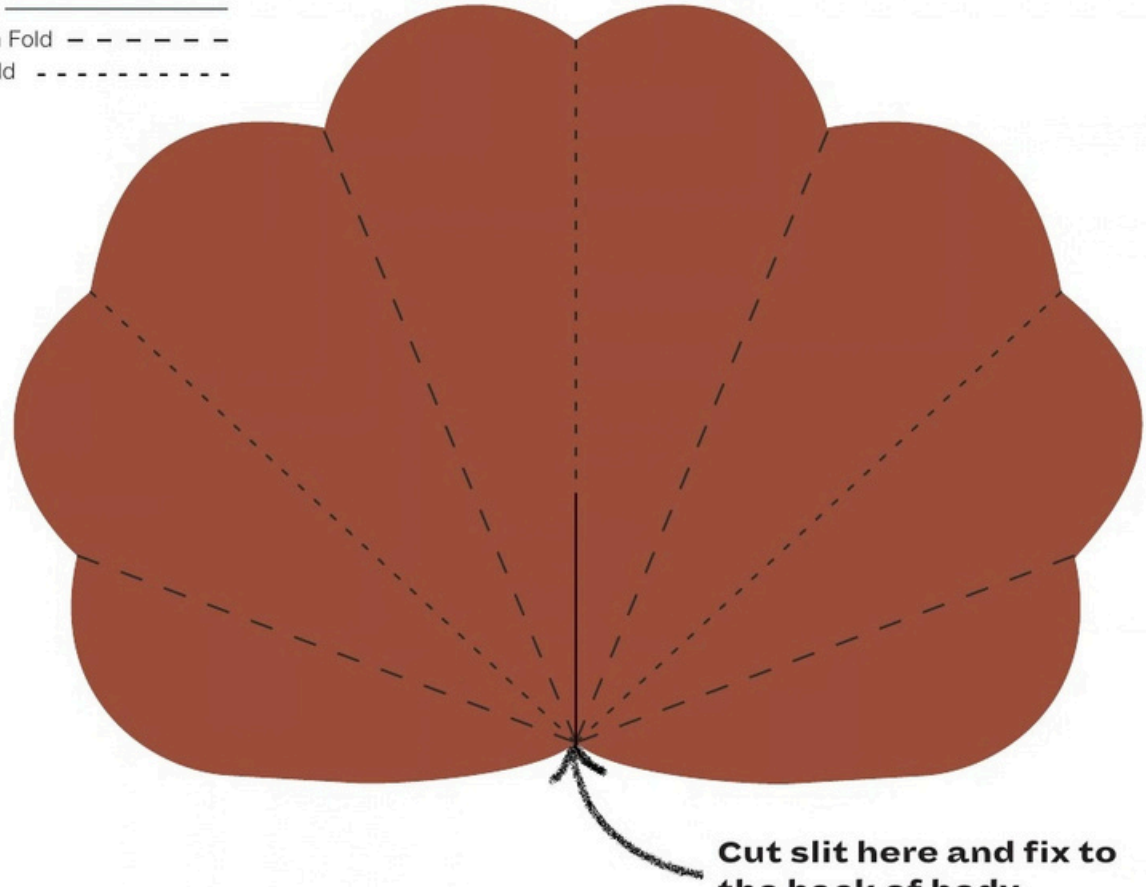

KEY

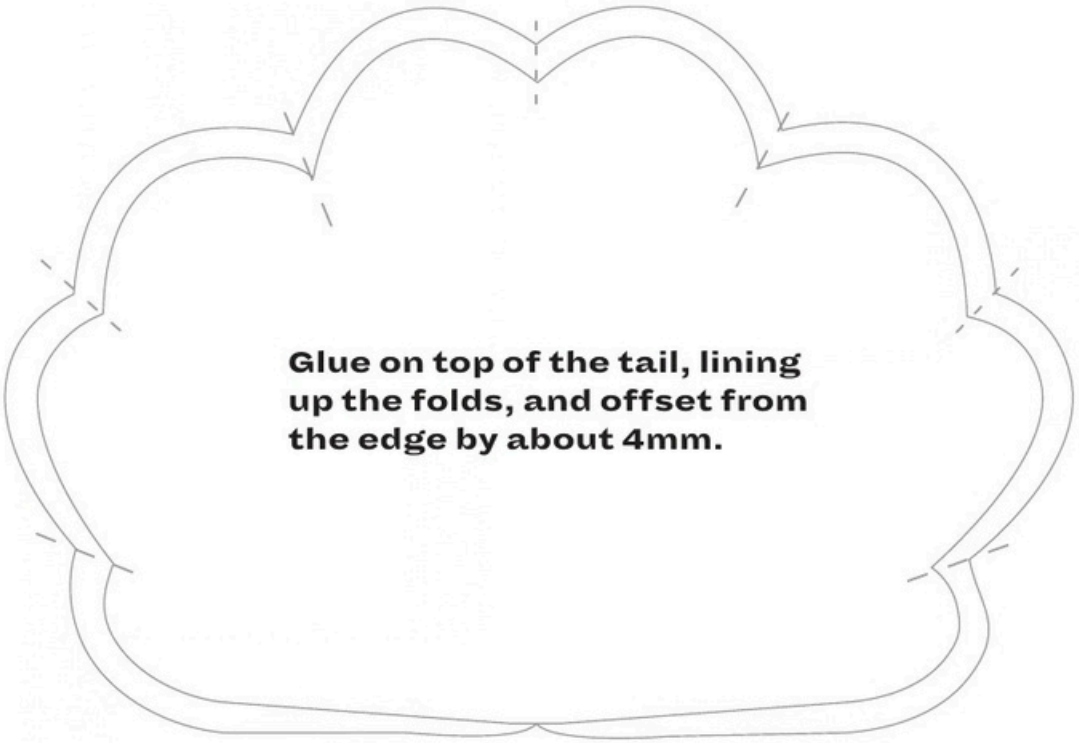

Mountain fold *Valley fold*
