

HOW TO @

WiFi Hotspot

1. To begin using the WiFi hotspot, press and briefly hold the power button on the front of the unit.
2. This will activate the hotspot. You can now connect to the network name GPL_Library_Hotspot# (the number will be unique to the device you are using.)
3. The password for your hotspot's wireless network is located on the back of the device. It is case sensitive.
4. From the device you want to use, open wireless settings and connect to the network with the name of this device. Your device must have wireless connectivity. This is standard in phones and tablets, but not older computers.
5. When connecting, input the password as it is written, using capital letters where needed.
6. Turn off the device by pressing and holding the power button until all lights turn on. They will turn off shortly after, indicating the unit is off.

Note: the device is on the T-Mobile/Sprint network, so it will only work where there is coverage in the US.

10 devices may connect at once.
